

High-Performance Industrial RFID Portal

General Features

- Specifically engineered for use in docks and industrial environments
- Compact design and easy installation
- Aluminum construction with electrostatic coating

Compatible Readers

- Identix EZ700 / EZ500
- Impinj R700 / R720
- Impinj R220 / R420

Antenna Options

Circular Polarization Antennas

- Identix 65C6095 – 6.5 dBiC gain with 60° x 95° beamwidth
- Identix 90C4090 – 9 dBiC gain, 40° x 90° beamwidth, and 15° electric tilt
- Identix 85C7070 – 8.5 dBiC gain with 70° x 70° beamwidth

Linear Polarization Antennas

- Identix 85DL4090 – 8.5 dBiL gain, dual linear H+V polarization 40x90 with 15° electric tilt

Optimizing Supply Chains

If your company seeks enhanced visibility and efficiency in the supply chain through RAIN RFID technology, we offer the ideal solution. The Identix DockView is engineered to meet the demands of your warehouse and distribution center, combining the exceptional performance of specialized Identix antennas with the lightweight durability of aluminum in a modular, streamlined installation. The result? The most advanced solution for RFID data capture in the industrial sector.

Precise Control of the Reading Zone

The Identix DockView adapts to various scenarios by offering multiple models of Identix Ultra-Wide Beam antennas. It operates at minimal power with a focused reading zone, ensuring highly controlled and well-defined reads while minimizing interference between adjacent reading points.

DockView is engineered to uniformly illuminate the reading zone, delivering precise readings without dependence on complex algorithms. Whether performing pallet-level or item-by-item reads, DockView provides tag detection with exceptional accuracy.

Engineered for durability

Beyond its advanced technology, DockView is distinguished by its robustness and long-lasting performance. Designed for operation in high-traffic industrial environments, it withstands occasional impacts from material handling equipment. Identix developed the DockView solution to endure harsh operating conditions without compromising performance, ensuring continuous operation even in the most demanding environments.

Scalability and Ease of Installation

DockView features a *plug-and-play* design, eliminating the need for additional servers or conventional power sources. Fully powered via Power over Ethernet (PoE), this solution reduces costs and accelerates return on investment (ROI).

The installation of DockView is straightforward and easily replicable, enabling scalable expansion of the solution as business demand increases. This guarantees enhanced operational efficiency and a faster return on investment for your company.
